## European Renewable Gas Registry

Join the association and participate in establishing the European biomethane market!

ERGaR, the international non-governmental, non-profit organisation, is built on knowledge and experience of established national biomethane registries and major stakeholders of the European biomethane market.

ERGaR welcomes new members: national biomethane registries, national biogas associations, natural gas industry partners, gas TSOs and DSOs and other stakeholders active in the European biogas and biomethane industries.

European Renewable Gas Registry

# ERGaR

## European Renewable Gas Registry

ERGaR aims at becoming the Europe-wide recognised organisation for administering and mass balancing volumes of biomethane virtually distributed along the European natural gas network.

The injected biomethane is blended with natural gas in the pipelines of the natural gas grid and the methane molecules of fossil and renewable origin cannot be differentiated. The operation of a mass balance system enables monetising the intrinsic (“bio”) value of exported biomethane without explicitly tracking the physical cross-border movements.

*“We are aiming at building the foundations of a European biomethane market by breaking down some of the barriers that exist today and creating a system allowing for injection of biomethane in a country and withdrawal in another.”*

Jeppe Bjerg, ERGaR President

Based on the cooperation of national biomethane registries in all European countries an independent, transparent and trustworthy documentation scheme for the cross-border transfer and mass balancing of sustainable biomethane will be established in such a way as to preclude miscounting. ERGaR will support the establishment of national registries in each European country and will endeavour their incorporation into its system.

*“We are strongly promoting the use of the European natural gas network to enable Europe-wide biomethane distribution. For ERGaR it is essential to secure the support by the stakeholders of the natural gas industry.”*

Attila Kovacs, ERGaR Secretary General
